

Accelerate Your Flow of Information — and Your Cash Flow.

Few healthcare providers have the staffing or resources to assess the status of their receivables each week, or to aggressively work small balances and aged accounts.

Xtend offers a revolutionary solution that is setting a new standard for revenue cycle management. With our Automated Claims Status Services, you can reconcile 100% of your claims to your most significant payers. In fact, we'll help you capture more A/R data in a day than a typical business office could gather in an entire month.

Via our proprietary technology, we'll format your data and submit files electronically to all applicable payers. Then, we'll verify the status of each account, including information on which claims have been denied (with detailed reasons), set for payment, are not on file with the payer or have been purged. As a result, you can:

- ▶ Significantly increase staff productivity by focusing only on accounts that require your action to be resolved and by allowing you to review all accounts electronically instead of piecemeal
- ▶ Identify any claims lost by payers or not submitted by your billing system

- ▶ Identify all outstanding balances — regardless of age or amount — from applicable payers
- ▶ Automatically organize your workflow
- ▶ Make better projections of cash flow
- ▶ Standardize denial management
- ▶ Sort all accounts by payers and see when each account is due for follow-up by your staff
- ▶ Reduce A/R days and improve your cash flow
- ▶ Extend the useful life of your IT system, since our system requires no software to install or maintain

Because we utilize reports from your Health Information System (not your billing software), we capture ALL amounts due from third-party payers. Our system — which works as efficiently for large hospitals as well as very small critical-access facilities — can upload account data from most patient accounting systems and offers the flexibility to provide reports to you in a variety of formats, such as Microsoft Excel.
